

Regenexx is covered under your health plan

Regenexx uses your body's natural healing agents to replace the need for up to 70 percent of elective orthopedic surgeries. Your blood and bone marrow cells are concentrated in our on-site orthobiologics lab and injected under image guidance into the precise area of your injury.

Regenexx allows you to get back to doing what you love without the lengthy recovery associated with invasive surgery.

learn more at an informational webinar

Our weekly informational webinars offer an opportunity to learn how **Regenexx** may be able to help treat your orthopedic pain without surgery. In these webinars we'll talk about:

- what your benefits cover
- what conditions **Regenexx** can help
- how a **Regenexx** procedure differs from surgery
- how recovery time is dramatically shortened
- how to get started with an evaluation

There also will be a live question-and-answer session in which you can ask specific questions about your **Regenexx** benefit.

how to register

Follow the **QR code** or **visit the address below** to register for one of our weekly webinars. Scheduled dates and times—including afternoons and evenings—are updated regularly.
